

dataglobal offers GDPR-compliant SAP archiving and comprehensive solutions for the seamless integration of SAP documents and records.

Record archiving in the right business context!

At last, you are able to attach and link additional

- documents
- attachments
- notes
- e-mails
- and all related files directly to your SAP records.

Likewise, you can store and display documents, such as outgoing invoices, delivery notes, or purchase orders directly from SAP in the corporate-wide digital workplace. This improves your SAP processes and allows you to use SAP content in other business processes at the same time.

Electronic files as a business solution

The dataglobal SAP solution also makes it possible to store all documents (both SAP and non-SAP) regardless of their origin in a hierarchical file

structure and to link them to an SAP record. Documents can be added both automatically – from any source – as well as manually by the user and the solution is completely intuitive to use.

SAP data archiving with certificate

dataglobal SAP archiving ensures legally compliant retention of data extracts and safeguards your compliance strategy during subsequent processing.

Our certification includes both the archive link and the ILM interface. With these interfaces, as an SAP user, you can archive and store data and documents and easily connect them with additional information.

Exceptional information lifecycle management

The dataglobal ILM interface facilitates the legally compliant management of data within SAP that is subject to

retention and deletion rules. Centra- It also ensures that data and doculized rules can be defined that automate and simplify archiving, the life-cycle, and blocking and deleting data, e.g. based on the requirements of the German GoBD Act or GDPR.

For example, retention periods can be saved and personal data can be securely managed against the background of your SAP ILM.

ments which are subject to statutory retention periods are not accidentally deleted

This means that you reduce and you can easily satisfy compliance requirements.

The added values at a glance

- > You put into practice perfect SAP information lifecycle management with retention management, blocking (legal hold function) and deletion according to the German GoBD and GDPR requirements
- > The dataglobal scanning solution helps you to record paper-based documents and, using barcode scenarios (late and early filing) and your SAP business workplace, you can link them directly to SAP records.
- > IIntegration of external documents, such as e-mails, attachments, or performance records for SAP busi-
- objects, such as invoices. All documents can be displayed within SAP.
- > dataglobal SAP ensures completeness monitoring for outgoing records. Missing documents can also be subsequently assigned and archived. This also puts SAP administrators in a position to retrospectively file outgoing records electronically that may have been sent as hard copies.
- > dataglobal SAP index export makes it possible to use index data from the SAP system in the archive to find and display documents even without an SAP client. This allows for SAP-independent document searches.
- You prepare your data for migration to SAP HANA, S/4HANA, and the cloud.
- > Through effective management, you control the growth of your data and increase your IT effectiveness.
- You increase your agility, IT efficiency and the productivity of your users.
- > With reduced data quantities and optimized systems, you effectively ensure cost reductions (total cost of ownership/TCO) and increase the economic efficiency (return on investment/ROI) of your SAP application.

dataglobal SAP archiving provides ERP data for centralized content services

dataglobal SAP archiving integrates the SAP world seamlessly into your digital workplace. Valuable company data is integrated, linked and prepared with content services for workflows and digital processes, as well as made available to increase your efficiency and competitiveness.
